- E-mail: fennu637@sina.com / Phone：18918561263

A software engineer with a decade of experience across full-stack development, DevOps, and cloud architecture, focused on AI Agents in recent years. As a Customer-Facing Builder spanning software engineering and customer delivery, works on the front line to co-create with customers, shape requirements, and deliver into production, having led several industry-flagship AI Agent assets from zero to one and distilled hands-on practice into reusable engineering paradigms.

Open Source Projects

- **Chorus** (https://github.com/Chorus-AIDLC/Chorus, 1.1k+ GitHub stars): An Agent Harness for AI-human collaboration, inspired by the AI-DLC methodology, driving end-to-end software engineering workflows from idea → design → task breakdown → implementation → verification through an "AI proposes, humans verify" reversed collaboration
  - Claude Code Plugin: Multi-Agent orchestration via Hooks and custom Agent mechanisms, with automatic context injection and independent Agent spawning for task review and quality verification
  - OpenClaw Plugin: SSE + MCP dual-channel architecture enabling AI Agents to autonomously detect engineering tasks and drive delivery 24/7

Working Experience

Amazon Web Services （2023.6 ~ Present）

Solutions Builder/AWS Solutions （2023.6 ~ Present）

A Customer-Facing Builder spanning software engineering and customer delivery: co-creating closely with customers, rapidly building PoCs, and delivering into production together with professional services teams and partners. Focused on healthcare and AI Agent domains, with the industry-flagship assets I led now deployed at multiple multinational pharmaceutical companies (MNCs).

- AI Agent Assets (Tech Lead):
  - Led MCS (Marketing & Commercial Set), a multi-Agent sales knowledge management platform based on Strands Agents and `Amazon Bedrock`. Built dual GraphRAG knowledge graphs with `Amazon Neptune` + `OpenSearch Serverless` for precise knowledge Q&A and strategy recommendation
  - Led Medical Deep Insights, a configurable deep-research Agent platform based on Strands Agents and `Bedrock AgentCore`, integrating multi-source tools via the MCP protocol and enabling dedicated research Agents to be generated dynamically from natural language
- Data & Search (Tech Lead):
  - Led Medical Insights Hub, featuring large-scale glossary real-time matching via `OpenSearch Percolate`, GenAI-powered professional document translation, with Word plugin integration

SAP Labs China （2016.10 ~ 2023.6）

Architect, Web development (Frontend/backend), DevOps and data engineer.

Architect/SAP Concur （2021.1 ~ 2023.6）

Design and develop SAP Concur eFapiao, a fapiao auto-recognition and validation system based on `NodeJS` and WeChat mini program

- DevOps:
  - Operating and deploying the project on AWS and `Kubernetes`
  - Service registration and discovery based on Concur customized `Istio` + `Envoy` service mesh
- Backend development:
  - Backend service based on `NodeJS` and `NestJS` framework
  - Data backend based on AWS distributed database `DynamoDB`
- Data engineering:
  - Collecting metrics generated by the running service and integrating with data pipeline via `AWS S3` and `AWS Kinesis` data stream
  - Utilizing `AWS Glue Job` to implement data ETL jobs based on `Spark`
  - Utilizing `Grafana` and `AWS Athena` to query and visualize collected metrics data
- Machine learning:
  - Deploying OCR model based on `PaddleOCR` to mark unrecognized fields of fapiao images
  - Training key information extraction model based on `SDMG-R` to extract key fields from fapiao images

Senior DevOps/SAP Jam Collaboration （2019.3 ~ 2020.12）

SAP Jam Collaboration is a collaboration tool based on `Ruby on Rails` / `React`.

- Led the DevOps team to migrate the project from on-premise data centers to AWS `Kubernetes`, managing infrastructure and GitOps workflows with `Terraform` / `Helm` / `ArgoCD`
- Introduced `Consul` + `HAproxy` for service discovery, deployed `Istio` Service Mesh for canary deployment and traffic monitoring
- Collaborated with international teams, supporting around-the-clock DevOps operations across multiple timezones

Full Stack Developer/SAP Jam （2016.10 ~ 2019.3）

- `NodeJS`-based SSR service, `Golang`-based multi-storage file service (S3/Azure Blob/NAS)
- `BackboneJS` → `React` / `TypeScript` frontend framework migration

Certifications

Skills

Familiar with

- AI/Agent: Strands Agents/Agent Harness/Claude Code Plugin/OpenClaw Plugin/LangChain/Amazon Bedrock/MCP/SSE/GraphRAG
- Web development: TypeScript/JavaScript/Python/HTML/CSS/Webpack/NodeJS
- DevOps: AWS/Docker/Kubernetes/Terraform
- Web framework: React/Next.js/FastAPI/Vue/NestJS
- Data engineering: Amazon Neptune/Amazon OpenSearch/AWS Athena/AWS DynamoDB

Know about

- Web development: Ruby on Rails/GraphQL/Golang/SEO
- DevOps: Jenkins/Service Mesh/Istio/Helm/ArgoCD/GitOps/AWS CDK
- Data engineering: AWS Glue(Spark)/Amazon Redshift/Amazon Aurora/MySQL
- Machine learning: PaddlePaddle/CNN/SDMG-R
